Sisal, also known as pineapple hemp, is native to Mexico and currently grown mainly in Africa, Latin America, and Asia. It is the hardest fiber with the largest amount and the widest range in the world today. As wallpaper, it has the advantages of non-toxic and odorless, sound-absorbing and moisture-proof, warm and breathable, not easy to age, no flaking, and soft reflection light, etc. It has extremely high artistic appreciation and practical value, giving a person with the good feelings of rough and bold, natural color and return to nature.

Natural veneer is the raw material, which perfectly combines the gentle texture and the modern art life, by using geometric collage craft with its soft texture.

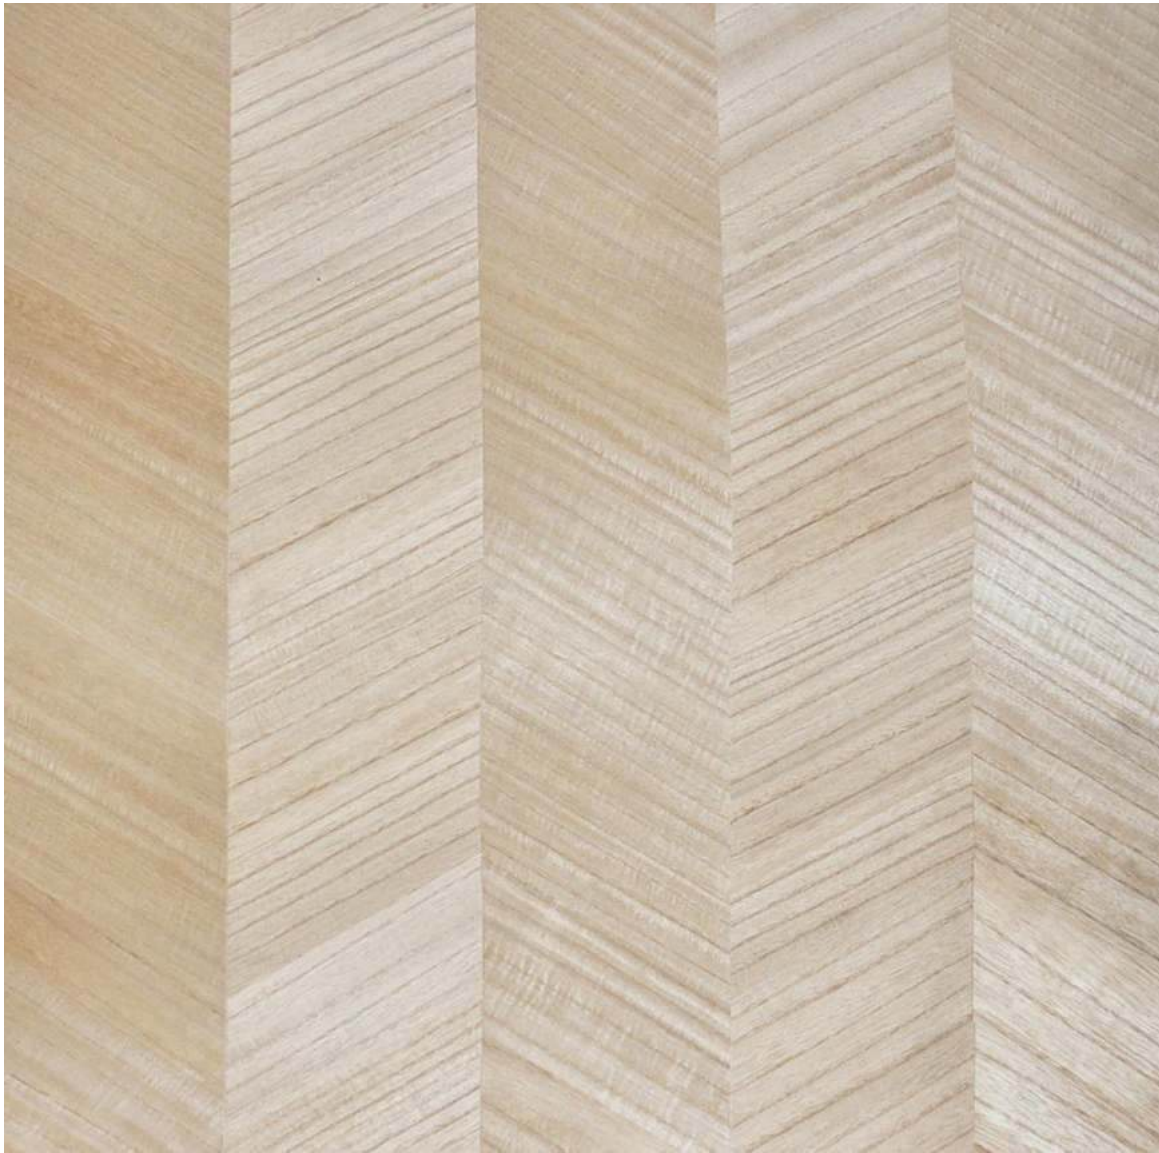

The natural and simple fragrance, the special and irregular natural texture, and the modern geometric shape of wood will give you the artistic enjoyment of nature and beauty.
